Cut here

After Cutting sleeve, it will fit standard FBR™ with adjustment from 5.5 to 7 inches Aproximately....

3 pack sleeves

New FBR™ are the most advanced models with the quick pin system. The forward pull helps to align the hook behind the tail. Make sure your knot is tight on the hook and center with the hook eye for good alignment. You may place a small rubber band over the hook to keep the hook near tail for better strike hookups. To have a better understanding of how salmon attack anchovy and herring underwater while trolling and different rigs under water.

Check out the incredible Free under water salmon video at www.sheltonproducts.com/FBR.html

**** Mash barb down to meet Fish & Game regs for salmon ****

WARNING
Must have a bead chain or high performance swivel above leader line to prevent line twist.
